

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

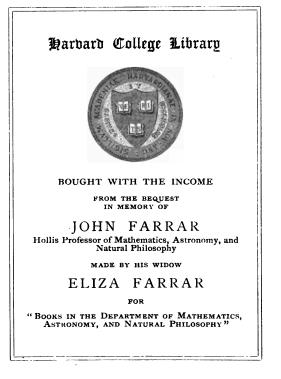

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

TABLES OF $\sqrt{1-r^2}$ AND $1-r^2$ FOR USE IN PARTIAL COR-RELATION AND IN TRIGONOMETRY' , By John Rice Miner

INTRODUCTION

In the calculation of partial correlation coefficients each coefficient is obtained from those of the next lower order by the formula:

$$r_{12 \cdot 34 \cdots n} = \frac{r_{12 \cdot 34 \cdots (n-1)} - r_{1n \cdot 34 \cdots (n-1)} r_{2n \cdot 34 \cdots (n-1)}}{\sqrt{1 - r_{1n \cdot 34 \cdots (n-1)}^2} \sqrt{1 - r_{2n \cdot 34 \cdots (n-1)}^2}}.$$
 (i)

A large part of the labor of calculation is thus involved in the determination of the factors in the denominator of the formula, and may be saved by reference to a table of $\sqrt{1-r^3}$ for different values of r. Similarly, a standard deviation of higher order is calculated from the formula:

$$\sigma_{1 \cdot 23} \dots = \sigma_{1 \cdot 23} \dots (n-1) \sqrt{1 - r^2}_{13 \cdot 23} \dots (n-1)$$
(ii)

in which again labor may be saved by reference to such a table, which I have calculated at the suggestion of Dr. Raymond Pearl.

Table I gives the values of $\sqrt{1-r^2}$ for r=.0001 to .9999, for values of the argument proceeding by differences of .0001. A similar table, but on a much less extended scale, has been given by Holbrook Working, in Quarterly Publications of the American Statistical Association, XVII, 767, June, 1921. Since $\sin^2 a + \cos^2 a = 1$, the table may also be used to obtain $\cos a$ when $\sin a$ is given and vice versa.

Table II, which gives the values of $1-r^2$ on a more extended scale than Table VIII of Pearson's Tables for Statisticians and Biometricians, may be used in the calculation of the probable error of the correlation coefficient from the formula:

$$PE_{r} = \frac{.67449}{\sqrt{n}} (1-r^{2}) = \chi_{1}(1-r^{2}).$$
 (iii)

¹ Papers from the Department of Biometry and Vital Statistics, School of Hygiene and Public Health, Johns Hopkins University, No. 55.

In calculating the tables the value of $1-r^2$ was obtained for each value of r and its square root then calculated by dividing $1-r^2$ by an approximate value of the square root and taking the mean of the divisor and quotient. This method of obtaining square roots depends on the fact that $\frac{x^2}{x+\delta} = x-\delta + \frac{\delta^2}{x} - \dots$ If, therefore, δ is small as compared with x the quotient will be nearly equal to $x-\delta$ and the mean of divisor and quotient will be a much closer approximation to x than the original $x+\delta$. Where, as in the greater part of this table, a close approximation to the square root can be found by differences from the preceding items, this method is very convenient. All work was done on a calculating machine and each table checked by differences.

In arrangement the tables are in general like logarithmic tables. The column at the left of the page gives the first three figures of r, while the fourth figure is given in the heading. To find the value of $\sqrt{1-r^2}$ for a given value of r, we therefore look in Table I for the first three figures of r (including zeros) in the column at the left of the page headed r. In the same line and in the column headed by the fourth figure of r we find the last figures of $\sqrt{1-r^2}$. For r=.0000to .7000 the first three figures of $\sqrt{1-r^2}$ are given as the separated figures in the column headed 0. Should there be no separated figures in column 0 in this line the three standing next above should be taken, except when the first of the figures in the column headed by the fourth figure of r has a bar above it, when we must take the separated figures from the line below in column 0. For r = .7000 to .8500 the first three figures of $\sqrt{1-r^2}$ are given in column 0 and column 5. If, therefore, the fourth figure of r is between 0 and 4, inclusive, the first three figures of $\sqrt{1-r^2}$ are to be taken from column 0 in the same line, except when there is a bar over the first figure in the column headed by the fourth figure of r, in which case the first three figures of $\sqrt{1-r^2}$ are found in column 5 in the same line. If the fourth figure of r is between 5 and 9, inclusive, the first three figures of $\sqrt{1-r^2}$ are to be taken from column 5 in the same line, except when there is a bar over the first figure in the column headed by the fourth figure of r, in which case the first three figures of $\sqrt{1-r^2}$ are to be taken from column 0 of the line below. For r = .8500 to .9999 all the figures of $\sqrt{1-r^2}$ are given in each column.

For example, if r = .0476 we find the first three figures .047 in the column r on page 7. In the same line and in the column 6 we find the figures 866. The separated figures in the column 0 next above the line are .998, and $\sqrt{1-r^2}$ is therefore .998 866. If r=.1944 we find .194 in the column r on page 10. In the same line and in the column 4 we find the figures 922. Since there is a bar over the first figure we take the .980 from the line below in column 0, and $\sqrt{1-r^2}$ is .980 922. If r = .7432 we find .743 in the column r on page 21. In the same line in column 2 we find 069 and in column 0 the first three figures .669, so that $\sqrt{1-r^2}$ is .699 069. If r = .7433 we find in column 3 of the same line 958. Since there is a bar over the first figure, we take the .668 from column 5, and $\sqrt{1-r^2}$ is .668 958. If r = .7757 we find .775 in column r on page 22. In column 7 of the same line we find 102 and in column 5 the first three figures .631, so that $\sqrt{1-r^2}$ is .631 102. If r=.7758 in column 8 of the same line we find 979. As there is a bar over the first figure we take .630 from column 0 of the line below, and $\sqrt{1-r^2}$ is .630 979. If r = .8937 we find .893 in column r on page 25 and in column 7 of the same line find $\sqrt{1-r^2}$ to be .448 665. If r is given to more than four places of decimals the value of $\sqrt{1-r^2}$ may if desired be obtained by the usual methods of interpolation.

Probably the most advantageous form in which to arrange the calculation of partial correlation coefficients is the following:

Coe	ficient	√1 —r ª	Product term	Numerator	Denominator	Coef	licient
r ₁₈	+.0476	.998 87	+,144 48	096 88	.656 30	r _{19*8}	1476
r ₁₈	+.1944	.980 92	+.035 38	+.159 02	.668 31	r ₁₈₋₂	+.2379
r _{st}	+.7432	.669 07	+.009 25	+.733 95	.979 81	T30-} .	+.7491

The derivation of the $\sqrt{1-r^2}$ column from Table I has already been explained. In the product term column +.144 48 is the product of +.1944 and +.7432, while the other items are similarly derived. In the numerator column -.096 88 = (+.0476) - (+.144 48), while .65630 in the denominator column is the product of .980 92 and .669 07 from the $\sqrt{1-r^2}$ column. In the last column -.1476 is the quotient of -.096 88 divided by .656 30. The arrangement of Table II is similar to that of Table I, except that for r=.0000 to .5000 the first three figures of $1-r^2$ are given in column 0, while for r=.5000 to .9999 they are given in both column 0 and column 5. To obtain the probable error of r, $1-r^2$ from Table II is multiplied by χ_1 from Table V of Pearson's Tables for Statisticians and Biometricians. For example, if for a population of 453, r=-.5627, we find .562 in column r of Table II on page 41. In column 7 of the same line we find 369. As r is between .5000 and .9999 we look in column 5 for the first three figures .683, so that $1-r^2$ is .683 369. From Table V we find $\chi_1=.03169$ for n=453. Therefore, the probable error of $r=.03169 \times .683$ 369=.0217.
